Subject: Standard Chlorine - RI/FFS July 2013

Alison, The New Jersey Department of Environmental Protection (Department) has reviewed the July 2013 Remedial Investigation / Focused Feasibility Study (RI/FFS) Work Plan and has determined this RI/FFS to be acceptable. The activities proposed in the July 2013 RI/FFS addresses on-site issues only, and did not address the adjacent and heavily contaminated Hackensack River. The Remedial Investigation of the Hackensack River sediments associated with the Standard Chlorine Site remains incomplete. Notwithstanding the existence of prior data sets, data gaps remain outside the IRM river sediment excavation footprint and the Responsible Parties must commit to completing the ecological risk assessment.

A hardcopy of the Department's response will be provided.
